

Flowflex Components Ltd

Material Safety Data Sheet

This Material Data Sheet applies to Valves supplied by Flowflex Components Ltd.

Information on the Composition

Valves are made from copper or copper alloys as specified in European copper and copper alloy product standards and are non-hazardous.

Hazard Identification

No hazards identified.

First-Aid Measures

No injury is likely to be caused by skin or eye contact. Inhalation and ingestion are not considered likely.

Firefighting Measures

Not considered to be flammable.

Accidental Release Measures

No special accidental release measures are considered necessary. The products do not pose any risk to persons and will not damage the environment.

Handling and Storage

Storage environment to be dry and protected from the elements. Single stack pallets only; stacking pallets on top of each other may cause damage to the product.

Exposure Controls/Personal Protection

No exposure controls or personal protection is required.

Physical and Chemical Properties

The composition of the products is in compliance with the requirements as specified in European copper and copper alloy product standards.

Stability

The products are stable.

Toxicological Information

Non-toxic.

Ecological Information

The products do not degrade in the environment.

Disposal Considerations

When no longer required, the products retain a value and should be recycled via a suitable scrap dealer.

**Transport Information**

No special transport requirements are required.

Regulatory Information

None.

Other Information

The above information does not form part of a user's assessment for the purposes of COSHH or other Health and Safety Regulations.
